Mortar Analysis Request Form

Disaggregation analysis of lime mortars is carried out in our laboratory and costs £142.00 plus vat per sample. The results show the proportion and grading of the insoluble aggregate. This is regularly used along with information provided on the mortar function, experiential and observational findings to assist in the selection of compatible repair mortars in order that a repair mortar closely matches the original colour, texture and strength. For each analysis we require approx. 50g of mortar. Please allow 10 working days to receive the report.

Name/Company	
Email Address	
Project Name	
Sample Address	
Sample Location (e.g. garden wall)	

Mortar Function

Please tick the appropriate options

Bedding Mortar	Internal Plaster	External Render
Brick	Onto masonry	Depth of render mm
Stone	Onto wooden lath	Brick background
Other		Stone background
		Other background
