Mortar Analysis Request Form

Disaggregation analysis of lime mortars is carried out in our laboratory and costs £172.00 plus vat per sample. The results show the proportion and grading of the insoluble aggregate. This is regularly used along with information provided on the mortar function, experiential and observational findings to assist in the selection of compatible repair mortars in order that a repair mortar closely matches the original colour, texture and strength. For each analysis we require approx. 50g of mortar. Please allow 10 working days to receive the report.
